

The Revenue Activation Layer

Turning NBC's Traffic Into Qualified Pipeline

Source: Basin::Nexus & Jeenie AI (Regata) Architecture

Target: TalSmart / NBC Universal Account

Architect: Leon Basin

Date: March 20, 2026

1. Missed Discoverability & Conversion Gap

You are training 15 AEs, yet NBC's highest-value prospects are slipping through the cracks.

Missed Discoverability

- **The Engine:** VPs of Sales are actively searching for training.
- **The Gap:** Without upstream trapping, intent is captured by competitors before they ever reach your domain.

Missed Conversion (The 48-Hour Tax)

- **The Engine:** Traffic that does land is met with a static form.
- **The Gap:** High-intent users fill out a form and wait days for an SDR. Buyers bounce before becoming SQLs.

2. Two Massive Leaks Occurring Simultaneously

Most organizations treat Marketing (traffic) and Sales (conversion) as siloed issues. This structural divide results in lost revenue.

1. **Capture Failure:** Not capturing all verified upstream traffic.
2. **Activation Failure:** Not converting the traffic you DO capture while their intent is at its absolute peak.

The Solution: A unified **Revenue Activation Layer** that connects Traffic, Intent, Conversion, and Pipeline into a single, closed-loop system. We replace static forms with an autonomous engine.

3. Step 1: Upstream Signal Refinery (Basin::Nexus)

Before a prospect ever lands on the website, we have identified their intent.

- **Programmatic Targeting:** We identify specific ICP targets (e.g., VPs of Sales).
- **Real-Time Triggers:** We deploy messaging based on precise triggers like funding rounds or executive hiring signals.
- **The Result:** More exact target profiles are driven directly to your domain, eliminating low-tier noise.

4. Step 2 & 3: Downstream Activation (Jeenie AI / Regata)

Once they land, we convert them in under 60 seconds.

Dynamic Activation

- **Instant Engagement:** Messaging adapts instantly based on OSINT profiles. No more "Contact Us" scrolling.

Qualification & Routing

- **Voice AI Qualification:** Prospects are run through MEDDIC/BANT frameworks via Voice AI in under 2 minutes.
- **Live Video Bridge:** Qualified prospects are bridged *immediately* via Slack to a live video call with an NBC AE while still on the website.

5. The Outcome: Deterministic Pipeline

This architecture guarantees you never lose a buyer to the "48-hour response tax".

- **Increased Pipeline:** Generate more pipeline from current traffic.
- **Immediate ROI:** See instant returns on upstream targeting efforts.
- **Operational Efficiency:** Zero additional SDR headcount is required to scale.
- **24/7 autonomous capture:** Continuous high-intent capture outside business hours.
